

# Advanced Stock Management for Wholesale & Retail with Sage 200 Stock Plus

colour size

season men/women

## Product Matrix & Stock Hierarchy

- Control complex stock hierarchy, e.g. a clothing retailer may have a hierarchy of menswear, trousers, jeans, style.
- Product Matrix allows flexibility to structure items that have variants associated with them. The matrix can be set up in three dimensions e.g. size, colour, style.
- Create potentially hundreds of stock items or add them to an order with one click.

Sage 200 Stock Plus extends standard Sage 200 functionality to allow wholesale and retail businesses to quickly and easily manage their stock. It is particularly beneficial to organisations that need to manage large numbers of variant stock items. Whatever you sell, Stock Plus will give your full control over your merchandise.

As well as the product matrix and stock hierarchy, Stock Plus provides effective warehouse/store management, ensuring that you always have sufficient stock. And with our barcoding facility, you can easily manage and print barcodes.

Stock Plus**

# Main Features & Benefits

■ Sage 200 Stock Plus

**Easy to use**– Extends standard Sage 200 functionality so no in-depth training required on additional complex screens.

**Integrates with Commercials**– Stock Plus also integrates seamlessly with the Sage 200 Commercials module.

## Product Matrix:

**Effectively manage large numbers of stock items**– Having a large number and variety of merchandise can be a difficult process to control. Stock Plus makes it easy to manage a large number of variant items using Stock Hierarchy as well as the three dimensional product matrix. A clothing store may set up a Stock Hierarchy as follows:

1. *Summer collection*
2. *Shirts*
3. *Style*
4. *Colour*

**Rapid creation of stock items**– Grid style screen allows for rapid creation of variant merchandise in the required dimensions (e.g. colour, size and style). This means at the click of a button, potentially hundreds of stock items can be created.

**Create multiple lines with one click**– Add potentially hundreds of lines to an order with one click. If for example, 100 lines are to be entered, Stock Plus would save the user about 20 minutes, compared to entering them individually.

**Ideal for use in telesales**– Improves efficiency of telesales executives, as fast order entry ensures that staff spend less time entering orders and more time taking them.

## About Eureka Solutions

Eureka Solutions are the UK's leading Sage Developer and were awarded Sage Developer of the Year 2009. We have solutions for a wide variety of areas including e-commerce integration, telesales, tradecounter, and retail.

As well as our off-the-shelf products we can provide quotes for customised projects, if we don't have the solution to meet your specific requirements.

## Warehouse/Store Management:

**Replenish stock levels**– Allows branches to send requests to transfer merchandise from head office when levels get below a specified amount. This ensures that there is always enough stock at each warehouse/store.

**Transfer multiple items**– Stock Plus makes stock movements easy by allowing multiple items to be transferred between locations. A 'transit' location allows merchandise to be accounted for when moving between locations.

**Creates internal Request Documentation**– Internal requests are created with documentation when transferring items from one location to another.

## Barcoding:

**Multiple, unique barcodes per stock item**– Stock Plus allows each stock item to be set up with multiple unique barcodes, either to be used purely for printing purposes or in conjunction with a handheld device.

**Use manufacturer/supplier codes**– Transfer manufacturer or supplier codes into system and relate them to internal stock codes.

**Integrate with Sage POS**– Ensure stock and sales transactions are posted correctly between the till and the Sage 200 back office system.
